

HatchWorks is searching for an experienced Full Stack Developer with deep knowledge developing enterprise web applications to solve mission-critical business needs for our clients. A full stack developer within HatchWorks will deliver successful projects by providing skilled technical expertise, leveraging strong interpersonal communication skills, and fostering deep collaboration in an Agile software development environment.

This individual must be able to provide technical leadership in large, complex environments working with cross functional teams. The full stack developer will assist in translating business requirements into technical requirements and must have a track record of successful and applicable projects. Also, this individual must have the technical skills and experience needed to develop cost-effective solutions that meet functional and performance requirements as well as provide demonstrable returns to the customer.

We are HatchWorks Technologies

We are innovators, technologists, and builders - all dedicated to creating intelligent purpose-built software products and solutions that improve the way people work and live. Our solutions drive revenue, market share, operational efficiencies, and most importantly delightful user experiences for industry leaders in healthcare, financial services, and communications to name a few.

Our key differentiator is our product-centric approach putting the end user first. You will work with user-obsessed experts who always start with “why” before “what”, and aspire to build feasible solutions that are viable for our customers' business and valuable for the end user [alt text - and aspire to build the right solution for the right audience]. We focus on outcomes over output and believe in accelerating time to value for our

customers in an agile focused collaborative manner. The fabric behind all of this is our people, culture, and core values holding us all accountable to each other.

#### Responsibilities:

- Work with Product Owner/Business Analysts to understand requirements and interact with other cross-functional teams to deliver business value through the interactions of composited SaaS technologies.
- Own the communications necessary to achieve frictionless DevOps and CI/CD pipelines
- Own development of features in every Sprint.
- Support the Agile Scrum team with planning, scoping, and creation of technical solutions for the new product capabilities through continuous delivery to production.

#### Qualifications:

- Proven ability to design and optimize application and data integration processes across disparate systems
- Experienced programming in C# using .NET Core with server-side JavaScript web application frameworks.
- Experience implementing front end web applications based on approved user interface designs using CSS, HTML, and client-side JavaScript frameworks such as React, Angular, Vue.js or similar frameworks.
- 5 or more years hands-on-experience with API / Integration tools and data integration patterns

- Experience with Cloud and Software-as-a-Service paradigms as well as the enabling technologies for infrastructure virtualization, service management, multi-tenancy, and information security.
- Strong debugging, problem-solving, and investigative skills. Ability to assimilate disparate information (log files, error messages, etc.) and pursue leads to find root cause problems.
- Practical experience implementing services-oriented architecture design, API management technologies, and enabling web service technologies including messaging, XML, JSON, RAML, REST APIs, and HTTP.
- Knowledge of data security best practices as related to authentication, authorization, and encryption, including SSL/TLS and HTTPS (nice to have).
- Proficiency with SQL and non-SQL Databases, data modeling, and database architecture, design, and optimization.
- Experience with DevOps, CI/CD tools, and deployment, verification, and automated testing frameworks.
- Experience with Agile methodologies.
- Experience writing unit tests.
- Ability to read, write, understand and speak English at B2 level or higher.
